

Candidate 4

Software Engineer
.Net Developer
Full Stack Developer

6 Years of Experience

Professional Profile

Software Engineer with a BS degree in Computer Science, strong leadership, research, skills. Over 9 years (software development) experience with emphasis on PHP, Python .NET, MVC, JAVA, JavaScript, jQuery, CSS & CSS3, html & html5 technologies. My other skills include research, project management, fast learning, goal achievement focus, teamwork, self-motivation, looking always for the best problems solutions, Specialties: Software development, QA, Scrum, Design Patterns, MVC, Frameworks, cross browsing, responsive design, adaptive design, work under Squad methodology and working with the new DevOps role.

Skills & Expertise

- **Platforms:** Windows 8, 7, XP, Vista. Linux, Ubuntu (server and desktop), iOS, Android, CENTOS
- **Languages:** VB.NET, C#, ASP.NET, MVC, Java, J2EE, PHP, HTML5, JavaScript, jQuery, CSS, CSS3, React, NodeJS, Angular, eslint, SASS, Angular, Yeoman, Jade, Knockout.
- **Databases:** SQL Server, MySQL, PostgreSQL, Oracle, PL/SQL, Cloudant, Mongo, Logstash, Elasticsearch, kibana.

Studies

- Software Engineer, Universidad Latina.
- Teaching, Universidad San Marcos

Professional Experience

Company #1 Web Developer:

Mentor of the technical course in programming for the client Introductory Programming course from basic principles (Algorithms, Pseudocode, Flowcharts), to data structures, operating systems, and object-oriented programming with their respective paradigms. Course explained and programmed in C #

Company #2 Web Developer:

Development NodeJS applications with different front-end libraries and frameworks, manage versions with GitHub and add unit testing to different projects, use slant to test the code standards.

Work with ELK stack, form the creation of ETL developing until the creation of notebooks and monitoring process at the end of the data collected. Work with client cloud on the architecture from scratch, mounting several API's on the cloud for different applications developed in NodeJS, Python, PHP, and mounting Single page applications using React and Angular.

For one of the main projects write all the microservices in NodeJS, and all the user experience developed in React, using express and Material design, combine with carbon. Mount each DB service such Cloud ant and Mongo for the project. Mount the CI/CD development cycle on IBM cloud using Travis, configuring each conf file, and GitHub as a version controller. Work with serverless function using open Whisk on cloud. Work with Docker and Kubernetes.

Company #3 Web Developer:

Taking care for functionality updates, and bug resolves, using Angular technologies.

Company #4 Project Manager:

Accomplish to have all objectives for the estimate times, manage a team in Costa Rica and India for approximately 20 developers, apply Scrum methodology. Also, performance task from server side, configuration from scratch for all the server infrastructure, using CentOS Linux, Security configurations layer.

Company #5 Senior Software Engineer:

Creation of budget system for client using technologies such as Angular, Java, Oracle etc. Creation of system prototypes and estimation of time. Work on Windows Technologies using classic ASP, ASP.NET and ASP. NET MVC. Estimate times. And work under SCRUM methodology.
